

Senior Product Manager (m/f/d)

YOUR MISSION:

Working directly with our customers and the engineering team, the Senior Product Manager shapes the product requirements, drives product related decisions and sets the overall product strategy. As the primary communication point you will interact closely with our users to gain an understanding of their needs, pains and how they benefit from our product.

RESPONSIBILITIES:

- Identify the various stakeholder needs in close interaction (including on-site visits)
- Conduct market segmentations, opportunity identifications, value articulation, pricing and competitive analysis
- Define product requirements by working closely with our engineering team
- Implement metrics to drive decisions by defining the most efficient growth channels, understanding the customer life cycle better and analyzing the impact of different strategic decisions.

YOUR PROFILE:

- 3+ years of experience in Product Management or Sales
- You hold a degree in economics, aerospace engineering or equivalent experience
- You have strong analytical skills and have high standards of quality
- You can work independently and have the skills to lead a team
- Excellent verbal communication skills. English proficiency is a must. German is a plus
- Enthusiasm to learn about the space industry and the software business
- Experience in the Space Industry is a plus

YOUR BENEFITS:

- Team of motivated entrepreneurial colleagues and experts in the space domain
- Possibility to quickly take over own responsibilities and leadership
- Fair payment with additional performance-based bonuses
- Flexible working hours and remote work options
- Free coffee in barista quality and fun office events

ABOUT US:

At OKAPI:Orbits is a young start-up developing an innovative AI-based platform for automated collision avoidance of satellites. We value entrepreneurial-minded, creative people, who are willing to take responsibilities to actively contribute to the development of OKAPI:Orbits and its products.
